1 Week-\$2080  
1 Month- \$9006  
6 Months - \$54,036

A discount has been applied from \$65 an hour to \$52 an hour in appreciation for the work Opportunity.

Pest Control Method we will be Using:

BurrowRX is a patented device that has been designated for pest control by the Environmental Protection Agency (EPA). It can be used in residential areas, public parks, commercial areas like golf courses, farms, and more.

Instead of relying on rodenticides, which is common with other treatment methods, this carbon monoxide-based pest control device works differently. Technicians insert the device into one of the burrows and disperse carbon monoxide throughout the burrow system using a smoke indicator. The gas works quickly, killing the rodents while they are underground and completing the extermination process in minutes.

Benefits of BurrowRx?

Not only does BurrowRx offer a chemical-free alternative to other extermination methods, but the process is also fast and doesn't harm non-target species when it's used as directed. This makes it safer to use around people, pets, and other wildlife.

Fast and Effective Burrowing Rodent Control

Research suggests that BurrowRx has an effectiveness rate of 95% or higher, making it a highly reliable treatment option. It also eliminates the time required for baiting, trapping, and removing burrowing animals. The treatment seeks burrowing rodents out in their burrows and eliminates them underground, also reducing the need to remove their remains.

BurrowRx Rodent Control Is a Non-Chemical Option

Compared to Rodent Dry Ice, BurrowRx is more economical and easier to use. Best of all, it doesn't rely on harmful chemicals. This makes it a perfect solution for areas like parks and other public spaces where rodenticides should be avoided to remove the risk of hurting other animals or even humans.

Outside of our service area, New York City's Rat Czar recently announced the city would use BurrowRx as part of its city-wide rodent mitigation efforts.

BurrowRx vs. Other Methods

People, pets, and other animals can be harmed by the effects of traditional rodent removal treatments. Because BurrowRx rodent control is chemical-free, it is much safer for humans, animals, and the environment.

When used as directed, BurrowRx is completely safe and will not harm non-targeted species. It also doesn't affect the soil and won't harm crops or plants.

Please reach out if you happen to have any questions.
